

# Enlighten Manager

## For Solar Professionals

Designed for the solar professional, Enlighten Manager streamlines the operations and maintenance processes and enables efficient management of multiple Enphase systems.

View detailed performance data from a fleet of PV installations down to the individual module.

Remotely diagnose and resolve issues impacting system performance and easily determine whether an unplanned truck roll is necessary.

Streamline operations and easily monitor activations in process.

Access performance data for PV module warranty claims.

Access performance reports 24/7 with secure, backed-up online data storage.

Compare actual system performance data against modeled performance data.

Receive automatic emails of events affecting system performance. Or view maintenance issues on graphs or maps.

The Enlighten software platform provides solar professionals and system owners with **ongoing operations** and **uptime assurance**.
