

# SP PRO Series II USB Driver for Windows 64bit

## Attention

SP LINK 6.0 and 6.1 does not correctly install the USB drivers for Windows 64bit systems.

A separate driver installation package for Windows 64bit system is available for download from the Selectronic web site at

<http://www.selectronic.com.au/software/SpProDriver64bit.zip>

Please extract zip file and run - dpinstx64.exe

This will install all of the appropriate drivers for Windows 64bit systems which will then allow SP LINK to detect and connect through to the SP PRO.

This is for Windows 64bit system only. Windows 32bit systems remain unaffected and SP LINK correctly installs the 32bit drivers for these systems.

## Additional Information
